

The course aims to deliver a general understanding of radio propagation aspects and provides a top level overview on the most important systems in the area of terrestrial as well as satellite communications. It comprises the following main sections:

1. Introduction to Radio Communications
2. Terrestrial Fixed Radio Communications
3. Terrestrial Mobile Communications
4. Satellite Communications

We are planning to expand our radio communications course portfolio shortly with more in depth courses on individual systems. The first courses to come are on UMTS/HSDPA, UMTS/LTE, WiMAX, and WiFi.

For more information on available course venues or to contract a course targeted at your institution's or company's needs feel free to contact us under info@breezesolve.com
